Flatiron Health
200 Fifth Avenue, 8th Fl
New York, NY 10010

To Flatiron Health,

I am writing to express my formal interest in applying for a role as a backend software engineer at Flatiron Health. After learning more about the company from a current engineer and former classmate, Matt McNaughton, I immediately thought that this would be the perfect role, and Flatiron Health the perfect company, for me.

Advancing research and early detection of cancer is critical to stopping it in its tracks. My grandmother and uncle in the U.S. owe their lives to early detection of breast and prostate cancers, and my grandfather suffered his death to cancer for a lack thereof in Calcutta. I've felt enough anxiety over this terrible condition to not do something about it now. Over my career so far, I have amassed experience in backend engineering and data engineering, including implementation of several internal tools I developed at Udacity. I have also had experience developing healthcare-related applications. In an internship as an Android Developer at Mobiquity Inc., I developed a health data collection application and at MIT's Hack Medicine Hackathon, I created a web app called Medicost that provides easy access to medical treatment cost information based on data pulled from the Department of HHS. Flatiron Health is truly the perfect amalgamation of my career interests.

I would love to set up an initial phone call with a recruiter. I live in New York, and I am available most days for a conversation. I would also like to note that I am in the late stages at another company in Menlo Park, CA, but am originally from New York and would love to remain closer to my family. I am best contacted through email, which is also on my resume: rahul.nath.eph@gmail.com. Thank you for your time and consideration.

Sincerely,

Rahul Nath
